

Public Assessment Report

Scientific discussion

Chisandra, coated tablet

(*Schisandra chinensis* (Turcz.) Baill., fructus, soft extract (2.0-5.0:1), ethanol 95 %; *Eleutherococcus senticosus* (Rupr. et Maxim) Maxim, radix, soft extract (17-30:1), 1) ethanol 70 %, 2) water)

Asp. No: 2006-2003

This module reflects the scientific discussion for the approval of Chisan. The procedure was finalised at 9 December 2008. For information on changes after this date please refer to the module 'Update'.

LAY SUMMARY

The Medical Products Agency (Läkemedelsverket) has granted Bringwell AB a traditional-use registration for the herbal medicinal product Chisandra, coated tablet. This product is available without prescription and can be bought from pharmacies and other outlets.

Chisandra, coated tablet, is traditionally used as an adaptogen in case of reduced performance ability such as tiredness and fatigue.

The active ingredients are soft ethanolic and water extracts from dried roots of eleutherococcus (rysk rot, *Eleutherococcus senticosus* (Rupr. et Maxim) Maxim) and ethanolic extract from dried fruit of schisandra (fjärilsranka, *Schisandra chinensis* (Turcz.) Baill.). This registration is based exclusively upon evidence of traditional use as an herbal medicinal product containing extracts of these two plants and not upon data generated from clinical trials. For traditional herbal medicinal products there is no requirement to scientifically prove the effect; adequate evidence of traditional use is sufficient.

The chemical/pharmaceutical quality of the product is acceptable and no new or unexpected safety concerns have been identified during the assessment. It was therefore decided that Chisandra could be registered as a traditional herbal medicinal product.

I. INTRODUCTION

Bringwell AB has applied for a traditional-use registration for Chisandra, coated tablet. The application was submitted under Article 16a traditional use registration for herbal medicinal product of the Directive 2001/83 EC, as amended.

The active substances are:

- *Schisandra chinensis* (Turcz.) Baill., fructus, soft extract (2.0-5.0:1), extraction solvent: ethanol 95 %
- *Eleutherococcus senticosus* (Rupr. et Maxim) Maxim, radix, soft extract (17-30:1), extraction solvent: 1) ethanol 70 %, 2) water

For approved indications, see the Summary of Product Characteristics.

II. QUALITY ASPECTS

II.1 Introduction

Chisandra is presented in form of coated tablets containing the active substances:

- 47.6 mg soft extract of *Schisandra chinensis* (Turcz.) Baill., fructus (2.0-5.0:1), extraction solvent: ethanol 95 %, which corresponds to 216-560 mg of dried plant material.
- 108 mg soft extract of *Eleutherococcus senticosus* (Rupr. et Maxim) Maxim, radix (17-30:1), extraction solvent: 1) ethanol 70 %, 2) water, which corresponds to 809-1428 mg of dried plant material.

The excipients are: maltodextrin, lactose monohydrate, potato starch, microcrystalline cellulose, povidone, colloidal anhydrous silica, magnesium stearate, shellac, macrogol, talc, potassium sorbate, virgin olive oil, and methyl parahydroxybenzoate (E218).

The coated tablets are packed in blisters.

All manufacturers involved in the production operate in accordance with EU-GMP, or where relevant, GACP (Good Manufacturing Practice, respectively Good Agricultural and Collection Practice).

II.2 Drug Substance

The herbal substances are dried fruit of *Schisandra chinensis* (Turcz.) Baillon, and dried root of *Eleutherococcus senticosus* (Rupr. et Maxim.) Maxim. The Swedish names of the plants are fjärilsranka and rysk rot, respectively. The specifications of the drug substances are internal but are very similar to the published herbal monographs in the European Pharmacopoeia.

The extracts are manufactured by Svenska Örtmedicinska Institutet, Gothenburg. The extraction is performed as two extraction cycles, first with 70 % ethanol then with water for *Eleutherococcus senticosus* and twice with 95 % ethanol for *Schisandra chinensis*. The active substance specifications include relevant tests and the limits for impurities have been justified. The content of the markers schisandrin and eleutherosides B+E is assayed.

Stability studies under ICH conditions have been conducted and the data provided are sufficient to confirm the retest period.

II.3 Medicinal Product

Chisandra, coated tablet, is formulated using excipients described in the current European Pharmacopoeia. All raw materials used in the product are safe with view to possible TSE/BSE risk.

The manufacturing process has been sufficiently described and critical steps identified. Results from the process validation studies confirm that the process is under control and ensure both batch to batch reproducibility and compliance with the product specification. The tests and limits in the specification are considered appropriate to control the quality of the finished product in relation to its intended purpose.

Stability studies under ICH conditions have been performed and data presented support the shelf life claimed in the SPC.

III. NON-CLINICAL AND CLINICAL ASPECTS

III.1 Introduction

The applicant has presented evidence that *Schisandra chinensis* and *Eleutherococcus senticosus* individually and in combination, have been used traditionally in the former USSR as “adaptogens”. Preparations containing the combinations of *Schisandra chinensis* and/or *Eleutherococcus senticosus* have been sold on the Swedish market since the 1970s.

The Committee on Herbal Medicinal Products (HMPC) of the European Medicines Agency (EMA) has issued a Community monograph on *Eleutherococcus senticosus* radix in 2008. There is no Community monograph for *Schisandra chinensis* or the combination of the two active substances. As Chisandra, coated tablet, was registered in 2008, the Community monograph was not taken into consideration in the national assessment.

III.2 Non-clinical aspects

The applicant has collected available information from the literature in the areas of non-clinical pharmacology and toxicology. This information has been assessed by the MPA and no signals of non-clinical safety concern have been identified. The exact mechanism of action of Chisandra, coated tablet, in relation to its traditional medicinal use cannot be considered clarified.

A product/extract specific study on mutagenic activity has been performed. The extract has been shown not to be mutagenic in Ames test.

Based on the non-clinical information, both from the literature and the product specific study, no signals of safety concern have been identified that would preclude approval of the ethanolic/water extracts of *Schisandra chinensis* fruit and *Eleutherococcus senticosus* root as active ingredients in a traditional herbal medicinal product.

III.3 Ecotoxicity/environmental risk assessment

Chisandra, coated tablet, is a traditional herbal medicinal product. According to “Guideline on the environmental risk assessment of medicinal products for human use” (EMA/CHMP/SWP/4447/00), (traditional) herbal medicinal products are exempted from the obligation to present an environmental risk assessment due to the nature of their constituents.

III.4 Clinical aspects

Results of clinical trials concerning clinical efficacy and safety are not required for the registration of a traditional herbal medicinal product.

III.5 Traditional use

The applicant has provided a bibliographic review and expert evidence which show sufficient evidence for the medicinal use of *Schisandra chinensis* fruit and *Eleutherococcus senticosus*, root, alone and in combination, throughout a period of at least 30 years, including at least 15 years within the Community.

With respect to the crude drug, the daily dose (1-2 tablets) of 2856 mg of *Eleutherococcus senticosus* root and 1120 mg of *Schisandra chinensis* fruit is in the same range as the doses listed in reference handbooks.

III.6 Clinical safety

The applicant has presented information regarding clinical safety from several handbooks and post marketing experience. Irritability, insomnia and headache were reported. These adverse effects are reflected in the SPC. The sales figures reported for Chisandra, coated tablet, are extensive but no signals of safety concern have been identified through spontaneous case reports or case reports in the literature.

As no data on use in children are available, Chisandra, coated tablet, cannot be recommended for use in children below the age of 12 years.

Due to lack of safety data, the use of Chisandra, coated tablet, during pregnancy and lactation is not recommended.

Based on the clinical safety information available, no objections are raised to the approval of Chisandra, coated tablet, as a traditional herbal medicinal product.

IV. PRODUCT INFORMATION

The product information (Summary of Product Characteristics, Package Leaflet and labelling) has been assessed and accepted by the Medical Products Agency.

V. OVERALL CONCLUSION, RISK ASSESSMENT AND RECOMMENDATION

For Chisandra, coated tablet, the handling, manufacture and quality control of raw materials, active substance and finished product are in line with GMP and pharmacopoeial requirements. The applicant has shown that the chemical/pharmaceutical quality is acceptable and can confirm that the process is under control and ensures both batch reproducibility and compliance with the product specification.

There is sufficient evidence for the medicinal use of *Schisandra chinensis* fruit and *Eleutherococcus senticosus* root, alone and in combination, throughout a period of at least 30 years, including at least 15 years within the Community.

No signals of preclinical or clinical safety concern have been identified under normal conditions of use.

Chisandra, coated tablet, can be recommended for registration as a traditional herbal medicinal product.

VI. APPROVAL

Chisandra, coated tablet, was approved in the national procedure on 2008-12-09.
