Scientific discussion

Dimethyl fumarate SUN **(dimethyl fumarate)**

SE/H/2452/01-02/DC

This module reflects the scientific discussion for the approval of Dimethyl fumarate SUN. The procedure was finalised on 2025-02-12. For information on changes after this date please refer to the module 'Update'.

I. INTRODUCTION

Based on the review of the quality, safety and efficacy data, a marketing authorisation has been granted for Dimethyl fumarate SUN, 120 mg, 240 mg, Gastro-resistant capsule, hard.

The active substance is dimethyl fumarate. A comprehensive description of the indication and posology is given in the SmPC.

For recommendations to the marketing authorisation not falling under Article 21a/22a/22 of Directive 2001/83/EC and conditions to the marketing authorisation pursuant to Article 21a/22a/ 22 of Directive 2001/83/EC to the marketing authorisation, please see section VI.

The application for Dimethyl fumarate SUN, 120 mg and 240 mg, gastro-resistant capsule, hard, is a generic application submitted according to Article 10(1) of Directive 2001/83/EC. The applicant applies through the Decentralised Procedure with Sweden acting as reference member state (RMS) and the following concerned member states (CMS):

SE/H/2452/01-02/DC: DE, ES, FI, FR, IT, NO, PL

The reference medicinal product chosen for the purposes of establishing the expiry of the data protection period is Tecfidera, 120 mg, gastro-resistant capsule, hard authorised in the Union since 2014, with Biogen Netherlands B.V. as marketing authorisation holder.

Potential similarity with orphan medicinal products

N/A

II. QUALITY ASPECTS

II.1 Drug Substance

The structure of the drug substance has been adequately proven and its physico-chemical properties are sufficiently described.

The manufacture of the drug substance has been adequately described and satisfactory specifications have been provided for starting materials, reagents and solvents.

The drug substance specification includes relevant tests and the limits for impurities and degradation products have been justified. The analytical methods applied are suitably described and validated.

Stability studies confirm the retest period.

II.2 Medicinal Product

The medicinal product is formulated using excipients listed in section 6.1 in the Summary of Product Characteristics.

The manufacturing process has been sufficiently described and critical steps identified.

The tests and limits in the specification are considered appropriate to control the quality of the finished product in relation to its intended purpose.

Stability studies have been performed and data presented support the shelf life and special precautions for storage claimed in the Summary of Product Characteristics, sections 6.3 and 6.4.

III. NON-CLINICAL ASPECTS

Pharmacology/Pharmacokinetics/Toxicology

Pharmacodynamic, pharmacokinetic and toxicological properties of dimethyl fumarate are well known. As dimethyl fumarate is a widely used, well-known active substance, no further studies are required, nor does the applicant provide any. Overview based on literature review is, thus, appropriate.

Environmental Risk Assessment (ERA)

Since Dimethyl fumarate SUN is a generic product, it will not lead to an increased exposure to the environment. An environmental risk assessment is therefore not deemed necessary.

There are no objections to approval of Dimethyl fumarate SUN from a non-clinical point of view.

IV. CLINICAL ASPECTS

Pharmacokinetics

To support the marketing authorisation application the applicant has conducted two bioequivalence studies (fasted and fed) comparing Dimethyl fumarate SUN with the reference product Tecfidera.

Pharmacokinetic properties of the active substance

Orally administered dimethyl fumarate undergoes rapid presystemic hydrolysis by esterases and is converted to its primary metabolite, monomethyl fumarate, which is also active. Dimethyl fumarate is not quantifiable in plasma following oral administration of dimethyl fumarate. Therefore, all pharmacokinetic analyses related to dimethyl fumarate were performed with plasma monomethyl fumarate concentrations.

Absorption: The t_{max} of monomethyl fumarate is 2 to 2.5 hours. As dimethyl fumarate gastro-resistant hard capsules contain microtablets, which are protected by an enteric coating, absorption does not commence until they leave the stomach (generally less than 1 hour).

Food does not have a clinically significant effect on exposure of dimethyl fumarate. However, dimethyl fumarate should be taken with food due to improved tolerability with respect to flushing or gastrointestinal adverse events.

Linearity: Dimethyl fumarate exposure increases in an approximately dose proportional manner with single and multiple doses in the 120 mg to 360 mg dose range studied.

Elimination: The terminal half-life of monomethyl fumarate is short (approximately 1 hour) and no circulating monomethyl fumarate is present at 24 hours in the majority of individuals.

Study DIM07821(fasted)

Methods

This was a single-dose, two-way crossover study conducted in 48 healthy volunteers, comparing Dimethyl Fumarate, 240 mg, gastro-resistant hard capsules with Tecfidera, 240 mg, gastro-resistant hard capsule under fasting conditions. Aspirin was administered orally prior to administration of dimethyl fumarate. Blood samples for concentration analysis were collected pre-dose and up to 12 hours post-dose. Plasma concentrations of the main active metabolite monomethyl fumarate were determined with an UHPLC/MS/MS method. Analysis of variance (ANOVA) was performed on the log-transformed data for AUC_{0-t} , $AUC_{0-\infty}$ and C_{max} . The study was conducted between 25th April 2023 and 11th May 2023.

Results

The results from the pharmacokinetic and statistical analysis are presented in Table 1 below.

Table 1. Pharmacokinetic parameters (non-transformed values; arithmetic mean $\pm$ SD, $t_{\max}$ median, range) for monomethyl fumarate

Treatment	AUC _{0-t} ng*h/ml	AUC _{0-∞} ng*h/ml	C _{max} ng/ml	t _{max} h
Test 1 n=48	4323 $\pm$ 1021	4347 $\pm$ 1020	2572 $\pm$ 897	1.75 (1.00-4.50)
Test 2 n=46	4107 $\pm$ 1078	4132 $\pm$ 1077	2405 $\pm$ 1110	2.25 (1.00-4.50)
Reference 1 n=48	3851 $\pm$ 1015	3876 $\pm$ 1014	2286 $\pm$ 804	2.88 (1.50-5.00)
Reference 2 n=45	3807 $\pm$ 924	3831 $\pm$ 922	2242 $\pm$ 696	3.00 (2.00-4.75)
*Ratio (90% CI)	110.54 (107.04 - 114.15)	110.45 (106.99-114.02)	108.11 (100.48 - 116.33)	-
AUC _{0-t} area under the plasma concentration-time curve from time zero to t hours AUC _{0-∞} area under the plasma concentration-time curve from time zero to infinity C _{max} maximum plasma concentration t _{max} time for maximum plasma concentration				

**calculated based on ln-transformed data*

For AUC_{0-t}, AUC_{0-∞} and C_{max} the 90% confidence interval for the ratio of the test and reference products fell within the conventional acceptance range of 80.00-125.00%.

Study DIM07921 (fed)

Methods

This was a single-dose, two-way crossover study conducted in 48 healthy volunteers, comparing Dimethyl Fumarate, 240 mg, gastro-resistant hard capsules with Tecfidera, 240 mg, gastro-resistant hard capsule under fed conditions. Blood samples for concentration analysis were collected pre-dose and up to 18 hours post-dose. Plasma concentrations of the main active metabolite monomethyl fumarate were determined with an UHPLC/MS/MS method. Analysis of variance (ANOVA) was performed on the log-transformed data for AUC_{0-t}, AUC_{0-∞} and C_{max}. The study was conducted between 13th April 2023 and 29th April 2023.

Results

The results from the pharmacokinetic and statistical analysis are presented in Table 2 below.

Table 2. Pharmacokinetic parameters (non-transformed values; arithmetic mean $\pm$ SD, $t_{\max}$ median, range) for monomethyl fumarate

Treatment	AUC _{0-t} ng*h/ml	AUC _{0-∞} ng*h/ml	C _{max} ng/ml	t _{max} h
Test 1	3543 $\pm$ 929	3511 $\pm$ 851	1653 $\pm$ 727	4.50 (2.33-14.00)
Test 2	3495 $\pm$ 919	3574 $\pm$ 1029	1663 $\pm$ 705	4.67 (1.50-14.00)
Reference 1	3776 $\pm$ 851	3881 $\pm$ 859	2102 $\pm$ 1018	5.33 (2.33-14.00)
Reference 2	3846 $\pm$ 1039	3868 $\pm$ 1024	2046 $\pm$ 972	5.17 (2.33-14.00)
*Ratio (90% CI)	92.28 (89.82 - 94.82) n=96	90.89 (88.59- 93.26) n=90**	82.27 (75.30 - 89.90) n=96	-
AUC _{0-t} area under the plasma concentration-time curve from time zero to t hours AUC _{0-∞} area under the plasma concentration-time curve from time zero to infinity C _{max} maximum plasma concentration t _{max} time for maximum plasma concentration				

*calculated based on ln-transformed data

**A few subjects did not have enough data points to calculate extrapolated AUC and AUC_{0-∞}

For AUC_{0-t} and AUC_{0-∞} the 90% confidence interval for the ratio of the test and reference products fell within the conventional acceptance range of 80.00-125.00%. The lower limit of the 90% confidence interval for C_{max} fell outside the conventional acceptance range but was within the widened acceptance limits of 70.70-141.44%, which was based on calculated intra-subject variability for C_{max} for the reference product which was greater than 30%, (48.09%).

The applicant has pre-specified in the study protocol that they wish to use widened acceptance limits for C_{max} and the replicate study design allows for calculation of intra-subject variability for the reference product. The applicant provided a clinical justification that the wider difference in C_{max} is clinically irrelevant. The applicant showed results of a statistical analysis for both reference periods, which confirm that no outliers were observed based on the widely accepted criterion defining outliers as having a studentized residual > 3. As requested, detailed results were provided.

A biowaiver was sought for the additional strength of 120 mg.

Discussion and overall conclusion

The bioequivalence studies and its statistical evaluation were in accordance with accepted standards for bioequivalence testing, as stated in the Guideline on the investigation of bioequivalence (CPMP/EWP/QWP/1401/98 Rev 1/Corr) and the Guideline on the pharmacokinetic and clinical evaluation of modified release dosage forms (EMA/CPMP/EWP/280/96 Corr 1). The metabolite monomethyl fumarate was determined in plasma, in line with the product-specific bioequivalence guidance for dimethyl fumarate (EMA/CHMP/421315/2017). Administration of Aspirin in order to reduce flushing in the fasted study is also in line with the recommendation in the product-specific bioequivalence guidance. The bioanalytical methods were adequately validated. The bioequivalence is assessed based on the active metabolite monomethyl fumarate, which is adequate.

The results of studies DIM07821(fasted) and DIM07921(fed) with 240 mg formulation can be extrapolated to the other strength 120 mg, according to conditions in the Guideline on the investigation of Bioequivalence; CPMP/EWP/QWP/1401/98 Rev. 1/Corr **, section 4.1.6, Guideline on the pharmacokinetic and clinical evaluation of modified release dosage forms (EMA/CPMP/EWP/280/96

Corr 1) and in line with the product-specific bioequivalence guidance for dimethyl fumarate gastro-resistant capsules (EMA/CHMP/421315/2017).

Based on the submitted bioequivalence studies, Dimethyl fumarate SUN is considered bioequivalent with Tecfidera.

Pharmacodynamics/Clinical efficacy/Clinical safety

No new studies on pharmacodynamics, clinical efficacy or clinical safety have been submitted. Provided that bioequivalence with the originator product is demonstrated, additional data is not necessary.

Risk Management Plan

The MAH has submitted a risk management plan, in accordance with the requirements of Directive 2001/83/EC as amended, describing the pharmacovigilance activities and interventions designed to identify, characterise, prevent or minimise risks relating to Dimethyl fumarate SUN.

Part II Safety specification

The MAH has submitted the version 0.1 RMP dated 19-Sep-2023 and proposed the following summary safety concerns:

Summary of safety concerns	
Important identified risks	• PML • Decreases in leukocyte and lymphocyte counts • Drug-induced liver injury
Important potential risks	• Serious and opportunistic infections (other than PML and herpes zoster) • Malignancies • Effects on pregnancy outcome • Interaction with nephrotoxic medications leading to renal toxicity
Missing information	• Long-term efficacy and safety • Safety profile in patients over the age of 55 years • Safety profile in patients with moderate to severe renal impairment • Safety profile in patients with hepatic impairment • Safety profile in patients with severe active GI disease • Increased risk of infection in patients concomitantly taking anti-neoplastic or immunosuppressive therapies

Assessor's comment: Having considered the data in the safety specification the assessor agrees that the safety concerns listed by the MAH are appropriate. It is in line with the RMP of the reference product.

Part III Pharmacovigilance Plan

Routine pharmacovigilance is suggested and in accordance with the originator the applicant has proposed data collection forms concerning PML, drug-induced liver injury, serious and opportunistic infections (other than PML and herpes zoster), malignancies, moderate lymphopenia, and severe

lymphopenia , which is acknowledged. No additional pharmacovigilance activities are proposed by the applicant, which is endorsed.

Part V Risk minimisation measures

Routine risk minimisation is suggested and no additional risk minimisation activities are proposed by the applicant, which is endorsed.

It is noted that the RMP of the reference product includes a DHPC as aRMM. However, this is not stated as a condition in section D of the EPAR-Product information. This DHPC was sent in Nov 2020 to inform HPCs about cases of PML in the settings of lymphopenia. This is already done by the originator, why this information does not have to be sent again by generics.

Part VI Summary of the RMP

The Summary of the RMP is endorsed.

Conclusion RMP assessment

The submitted Risk Management Plan, version 0.1 signed 19-Sep-2023 is considered acceptable.

The MAH shall perform the required pharmacovigilance activities and interventions detailed in the agreed RMP presented in Module 1.8.2 of the Marketing Authorisation and any agreed subsequent updates of the RMP.

An updated RMP should be submitted:

- At the request of the RMS;
- Whenever the risk management system is modified, especially as the result of new information being received that may lead to a significant change to the benefit/risk profile or as the result of an important (pharmacovigilance or risk minimisation) milestone being reached.

If the dates for submission of a PSUR and the update of a RMP coincide, they can be submitted at the same time, but via different procedures.

V. USER CONSULTATION

A user consultation with target patient groups on the package information leaflet (PL) has been performed on the basis of a bridging report making reference to Tecfidera, EMA/800904/2013, regarding content and the MAH's own product Morphine 1 mg/ml solution for infusion in pre-filled syringe, regarding layout.

The bridging report submitted by the applicant has been found acceptable.

VI. OVERALL CONCLUSION, BENEFIT/RISK ASSESSMENT AND RECOMMENDATION

The quality of the generic product, Dimethyl fumarate SUN, is found adequate. There are no objections to approval of Dimethyl fumarate SUN, from a non-clinical and clinical point of view. Bioequivalence between the test and reference product has been adequately demonstrated. The product information is acceptable. The benefit/risk is considered positive, and the applications are therefore recommended for approval.
